

# Welcome to Chemelot.

**Before entering our plants, please think about safety and potential hazards.**

For after all:

Safe working is important not only for yourself.  
Safe working means you can return home safely.  
For you, for your colleagues, for everyone.

## Uniform plant safety instruction

The Chemelot plant safety instruction covers the general regulations applying to all plants.

The subjects discussed include:

- Work permits and LMRAs
- Dangerous substances and situations
- Personal protective equipment
- What to do in case of an alarm

Plant specific information can be found in the plant, for instance on the plant information sheet. This, in combination with the plant safety instruction, should enable personnel to enter and work in plants in a safe manner.

## For whom?

The new plant safety instruction is mandatory for anyone who enters a plant on the Chemelot site without being supervised. The test must be passed before the plant can be entered and work can be started.

Upon a successful test, a plant safety certificate is issued that has a term of validity of one year (for contractor staff, non-main contractors) or three years (for Chemelot and main contractor staff). Safety certificates obtained on the basis of the old plant instruction remain valid until the personal date of expiry.

## How can the new plant safety instruction sessions be attended?

- Main contractor staff: in-house, checked by authorized persons
- Staff of Chemelot-based companies: in-house
- Non-main contractor staff and external company staff: at Chemelot, Park Services/ ACC location, in the instruction room, with advance notification via [www.sitech.nl/nl/trainingen-park-services](http://www.sitech.nl/nl/trainingen-park-services)

If it is absolutely impossible to attend the instruction session in one of the above ways, it can be attended in the plant, which is to be checked by the duty officer or the local instructor.

The plant safety instruction is available in Dutch, English, German, French, Portuguese and Polish.

## Alarm at Chemelot

- Do not panic
- Make sure you know in which siren area you are and where you can find the escape routes and the assembly point
- Do not enter the alarm area and listen to the messages over the PA system

## Emergency number 046 - 476 66 66

Call this number to report accidents and dangerous or suspect situations.

## Information and contact

If you have any questions about the plant safety instruction, please contact Sitech Services, T: 046-476 40 32, E: [fabrieksveiligheidsinstructie.chemelot@sitech.nl](mailto:fabrieksveiligheidsinstructie.chemelot@sitech.nl)

## We wish you a safe stay

Safe behavior implies that we work together to create a safe and acceptable situation at Chemelot. Know the rules, be alert and speak out when you observe unsafe behavior.
